-: FUNCTION: INHIBITOR OF THE WIT SIGNALING PATHWAY. DOWN REGULATES
-: BETA-CATENIN, PROBABLY FACILITATE THE PHOSPHORYLATION OF BETA-CATENIN AND APC BY GSK-3B (BY SIMILARITY).

-: SUBUNIT: INTERACTS WITH GLYCOGEN SYNTHASE-3 BETA (GSK-3B)
-: AND BETA-CATENIN. THE INTERACTION BETWEEN AXIN AND BETA-CATENIN.

OCCURS VIA THE ARMADILLO REPEATS CONTAINED IN BETA-CATENIN.

                                                                                                                                                                                                                                                                                                                                                              Ikeda S., Kishida S., Yamamoto H., Murai H., Koyama S., Kikuchi A.;

Axin, a negative regulator of the Wnt signaling pathway, forms a
complex with 65K-3beta and beta-catenin and promotes GSK-3beta-
RT dependent phosphorylation of beta-catenin.*;

REMBO J. 17:1371-1384 (1998).

C. -1- FUNCTION: INHIBITOR OF THE WNT SIGNALING PATHWAY. DOWN REGULATES
BETA-CATENIN. PROBABLY FACILITATE THE PHOSPHORYLATION OF BETA-
CATENIN AND APC BY GSK-3B AND BETA-CATENIN. THE INTERACTION
C. -1- SUBGUNIT: INTERACTS WITH GSK-3B AND BETA-CATENIN. THE INTERACTION
C. ENWEEN AXIN AND BETA-CATENIN OCCURS VIA THE ARMADILLO REPEATS
C. CONTAINED IN BETA-CATENIN. TERNARY COMPLEX. ALSO BINDS TO
PLAKOGLOBIN (GAMMA-CATENIN). APC, DVI AND PP2A (BY SIMILARITY).
C. -1- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).
C. -1- TISSUE SPECIFICITY: HIGHLY EXPRESSED IN TESTIS, THYMUS AND LUNG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PHOSPHORYLATION.
                                                                                                                                                                                                                                                                                                                                   WHEN HYPERPHORPLATED.

TISSUE SPECIFICITY: FOUND IN EGG CHAMBERS OF THE OVARY AND TISSUE SPECIFICITY: FOUND IN EGG CHAMBERS OF THE OVARY AND UBIQUITOUSLY THROUGHOUT EMBRYOGENESIS AND IN DISCS. EXPRESSION 1 NOT SEEN IN SALIVARY GLANDS, MUSCLES OR VENTRAL GANGLIA BUT IS OBSERVED IN BRAIN LOBES.

OBSERVED IN BRAIN LOBES.

PTM: PHOSPHORYLATED. WG SIGNALING GENERATES HYPERPHOSPHORYLATED FORMS OF DSH WHICH ARE THE ACTIVE FORMS.

SIMILARITY: BELONGS TO THE DSH FAMILY.

SIMILARITY: CONTAINS 1 DEP DOMAIN.

SIMILARITY: CONTAINS 1 PDZ/DHR DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: REQUIRED TO ESTABLISH COHERENT ARRAYS OF POLARIZED CELL AND SECMENTS IN EMBRYOS. PLAYS A ROLE IN WINGLESS (WG) SIGNALING POSSIBLY THROUGH THE RECEPTION OF THE WG SIGNAL BY TARGET CELLS AND SUBSEQUENT REDISTRIBUTION OF ARM PROTEIN IN RESPONSE TO THAT SIGNAL IN EMBRYOS. THIS SIGNAL SEEMS TO BE REQUIRED TO ESTABLISH PLANAR CELL POLARITY AND IDENTITY.

SUBCELLULAR LOCATION: CYTOPLASMIC. ASSOCIATED WITH THE MEMBRANE

Prediction of the coding sequences of unidentified human genes. VI.

The coding sequences of 80 new genes (KIRA0201-KIRA0280) deduced by

Tanalysis of cDNA clones from cell line KG-1 and brain.";

LONA Res. 3:321-339(1966).

LONA Res. 3:321-339(1966).

C --- FUNCTION: MAY PLAY A ROLE IN THE SIGNAL TRANSDUCTION PATHWAY

C --- SUBCELULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

C --- SIMILARITY: BELONGS TO THE DSH FAMILY.

CC --- SIMILARITY: CONTAINS 1 DEP DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

NOTE: This is a 'working draft' sequence. It currently consists of 30 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
